

# Munters receives major order for colocation data center

Munters has received an order at approximately MUSD 88 (about MSEK 955). The order received is from a US-based colocation data center company for chilled water air handlers.

Munters Group (MTRS), a global leader in energy-efficient air treatment and climate control solutions, has received this major order from a US-based colocation data center company for chilled water air handlers at approximately MUSD 88. It is to be deployed at multiple data centers in the US. Deliveries are estimated to begin in the fourth quarter of 2024 and to be finalized in the fourth quarter of 2025.

“This highlights our strong position as a trusted partner in the growing and transforming market of data center cooling. This major order, after several others, reconfirms the opportunity, strategic rationale and success we envisioned a year ago when the data center part of Munters became an own Business Area,” says Klas Forsström, President and CEO of Munters.

“The data center market is looking for energy efficient, scalable, adaptive, and therefore future proofed cooling technology. We offer exactly that in this order through a customer specific solution that supports high, mixed, and variable power densities and is compatible with different cooling infrastructures to accommodate both current and future needs” says Stefan Aspman, President of Data Center Technologies and Group Vice President, Munters Group.
